

# INSUREVISION AI — EXTERIOR FLOW DESIGN GUIDE

## Core Concept

The claim is mostly resolved before the adjuster enters the home.

## Frame 1 — Arrival

Address bar + 'Claim initiated' — minimal UI, calm entry.

## Frame 2 — First Detection

1–2 subtle detection boxes appear. Label: 'Wind damage detected'.

## Frame 3 — Exterior Analysis (Hero Frame)

Primary damage card: Wind Damage — 92% — €5,200. Clear visual hierarchy.

## Frame 4 — Unreported Damage

Additional damage detected — Not included in initial claim. Subtle, non-accusatory.

## Frame 5 — Context Validation

Panel: Recent storm activity detected. Policy covers storm damage. Verified.

## Frame 6 — Decision State

Damage consistent with reported event. Claim ~70% complete.

## Frame 7 — Final Pre-Entry

All checks complete: damage categorized, cost estimated, policy validated.

## Design Direction

- Dark cinematic environment
- Subtle storm damage realism
- Neon green UI accents
- Glass panels with blur

## **UI Behavior**

- Reveal progressively
- Analyzing → Detected → Validated
- No abrupt UI pop-ins

## **What to Avoid**

- Overloaded UI
- Flat dashboards
- Unrealistic damage exaggeration
