

INSUREVISION AI — XR UI DESIGN GUIDE (ANNOTATED)

Design Principle

We are designing intelligence appearing in the real world — not a traditional app UI.

Annotated Breakdown

1. Address Label (Top Left): Entry point for context
2. Primary Damage Panel (Center): Main insight — must dominate visually
3. Context Panel (Top Right): Validation layer (weather, policy)
4. Detection Boxes: Anchored to real-world objects
5. Unreported Damage Panel (Bottom Left): Soft warning — non-aggressive
6. Cost Panel (Bottom Right): Supporting financial detail

Visual Style

- Dark cinematic background
- Neon green accents with soft glow
- Glassmorphism panels (blur + transparency)
- Rounded corners (12–16px)

Motion Guidance

- Fade in elements
- Avoid harsh animations
- Maintain smooth transitions

Core UX Principle

The UI should feel like the world is explaining itself.
